

Write a program to print your name without using semicolon in the program.

Code:-

```
public class Assignment2_1 {  
    public static void main(String[] args) {  
        while (System.out.printf("Anirban\n") == null) {}  
    }  
}
```

The screenshot shows a Windows command prompt window titled "C:\Windows\system32\cmd.exe". The prompt is at the directory "D:\javaandroidstudy\corejavasession2". The user has entered the command "javac Assignment2_1.java" to compile the program. The next command is "java Assignment2_1", which has been executed, resulting in the output "Anirban". The prompt is now waiting for the next command, indicated by an underscore.

```
C:\Windows\system32\cmd.exe  
D:\javaandroidstudy\corejavasession2>javac Assignment2_1.java  
D:\javaandroidstudy\corejavasession2>java Assignment2_1  
Anirban  
D:\javaandroidstudy\corejavasession2>_
```
